<p>Edible sheet contains excipients, plasticisers and binders.</p>	<p>EXAMPLE Mouth-melt film (1 mm thickness) was prepared from lactose (312.5g), starch (302.5g), crystalline cellulose (20.0g), pullulan (20.0g), sucrose fatty acid ester (20.0g), aspartame (10.0g), menthol (15.0g), glycerine (200.0g) and maltitol (100.0g). (6pp062DwgNo.0/0)</p>	
<p>USE The sheet is used as a support base for mouth melting foods and medical products such as cough cubes.</p> <p>PREFERRED PRODUCT The edible sheet comprises 35-85 wt. % excipients e.g. sugar, sugar alcohol powder, starch, and/or crystalline cellulose, 10-40 wt.% plasticisers e.g. glycerine, propylene glycol, saturated aqueous solution of sugar alcohol and/or saturated aqueous solution of oligosaccharide and 1-25 wt.% binders e.g. water-soluble polysaccharide such as pullulan, gelatin or locust bean gum. The sheet is prepared by extruding the mixture of the excipients, plasticisers and binders containing foods or medicated components.</p>		JP 10179045-A
